We're Here to Help in Snowflake

Atmospheric G2

What is Snowflake?

Snowflake is a cloud-based data platform that helps you **store**, **manage**, and **analyze large amounts of information** easily and efficiently.

AG2 can **seamlessly share datasets from other data providers** who are in the Snowflake ecosystem.

Atmospheric G2 can share the specific datasets you're interested in, **both in type and geography,** based on your AG2 Trader subscription.

Set Up Your Free Trial with AG2 on Snowflake

1. Provide your sales representative with your Snowflake **Data Sharing Account Identifier**.
2. Get access to all our available trial data that you would like.

Happy with your trial?

We'll seamlessly upgrade you to a full subscription access.

Not In Snowflake?

Atmospheric G2 can now host your Snowflake account. See the reverse side for more details.

AG2 Supports All the Major Cloud Providers

aws

Azure

Google Cloud

AG2 can replicate the data based on the cloud your Snowflake account is set-up in.

Why Snowflake?

- Get **fast, direct access** to vast historical weather insights – no downloads, no infrastructure to manage – just powerful analytics at your fingertips.
- No need to manage files or build complex pipelines. Everything is **live, query-ready**, and **built for speed**.
- **Better decision-making** with historical weather intelligence allows you to streamline the building of your own proprietary models.
- Your information is **secure, reliable, and governed** through Snowflake's built-in controls.

Not a Snowflake subscriber? Not a problem.

Atmospheric G2 can now host your Snowflake account directly within our environment, giving you secure, read-only access to AG2 datasets — without requiring your own Snowflake subscription or infrastructure. Here's what that means for you:

- No Snowflake subscription to purchase
- No environment to configure or manage
- No additional infrastructure
- No hoops to jump through

We create and manage the account. You log in and start querying.
